Tribal Superfund Working Group: Cultural Perspectives & Resources in Superfund Work

- How do we ensure that both culture and natural resources are protected when we conduct remediation and/or restoration activities at Superfund or other contaminated sites?
- How can we utilize cultural knowledge in our decisions and approaches, while at the same time protecting that knowledge?
- Have you taken an approach that has been successful or has worked for your Tribe that you want to share?
- This is your time to share and brainstorm with your colleagues!
